NAME

showbus - analyzes a netlist to extract buses from it

SYNOPSIS

showbus [options] <circuitname>

OPTIONS

<circuitname>

Seadif circuit name to be analyzed.

-f <functionname>

Seadif function name (default: <circuitname>).

-l <libraryname>

Seadif library name (default: current working directory name).

-n   Also print the nets contained in each bus.

-h   Print help screen, then exit.

DESCRIPTION

Showbus shows the buses of a circuit. This is essentially a print-out of the seadif BusList structure associated with the circuit.

EXAMPLE

To show the buses of the circuit of cell count8 use:

% showbus count8
