

**NAME**

getproc - list process data from ICD data base

**SYNOPSIS**

**getproc** [proc\_id | proc\_name]

**PARAMETERS**

*proc\_id* | *proc\_name*

List process data of specified process id or process name.

Default process data of current project is listed.

**DESCRIPTION**

*Getproc* is a program to list the process data of one of the ICD processes on the system. It shows which masks are available for the process, together with some of their properties.

If no argument is specified the process data of the current project is listed.
